

40 YEARS OF  
**STEM** 

Your partner for patient handling  
since 1986

**Hall 6 – Booth 604**

# Hall 6 – Booth 604

For forty years, Stem has been developing and delivering solutions for emergency services, patient transport and patient management. Founded in 1986 by Ezio Menna, the company has grown over time into an internationally recognized player in the field of emergency care.

The year 2026 marks an important milestone for Stem: 40 years of activity built on three core values that have guided the company from the very beginning.

Reliability, in designing solutions that rescuers can depend on every day.

Commitment, in addressing every challenge with a practical approach and a strong focus on results.

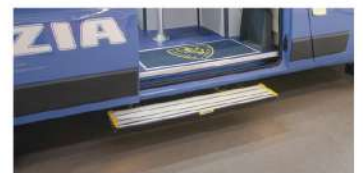

Listening, to those working in the field, whose experience drives innovation.

Today, Stem operates in 38 countries, with subsidiaries in France and Germany, and a global network of distributors and service centers supporting customers and partners worldwide.

Within this journey, the Research & Development department plays a central role. It is here that continuous research and engineering activities take shape, aimed both at anticipating market evolution and at developing tailored solutions based on specific customer requirements. This ongoing dialogue with field professionals gives rise to special projects which, in many cases, become new industry standards and contribute to expanding the Stem product range, which today includes:

- Electric and manual stretchers with advanced functions for patient transport
- Assisted loading systems, compatible with all types of stretchers, designed to reduce operator effort to zero
- Shock-absorbing, rigid, manual and electric stretcher support systems
- Biocontainment, sanitization and mobility solutions
- Advanced MedEvac solutions
- Electric and mechanical steps for vans, emergency vehicles and passenger transport vehicles, with a load capacity of up to 300 kg
- Automatic ejector power inlets for emergency vehicles
- High-performance boats for rescue operations, firefighting and maritime patrol

With forty years of experience in the sector, a strong focus on custom design and a dedicated Research & Development department, Stem has extended its know-how to the development of MedEvac solutions designed to meet even the most complex operational requirements, including military applications.

This growth-oriented and market-driven vision is also reflected in Stem Deutschland, the subsidiary founded in 2024 and based in Erlenbach. It represents the natural evolution of a collaboration of over 25 years between Stem and Tekma. The direct presence in Germany marks an important strategic step: in addition to steps, already among the most widely established Stem products on the German market, the subsidiary brings the company's full product portfolio to the region, while also providing qualified technical support and a direct point of contact for customers and partners.

We look forward to welcoming you in Hall 6, Stand 604, to discover our products first-hand!
